## DESCRIPTION

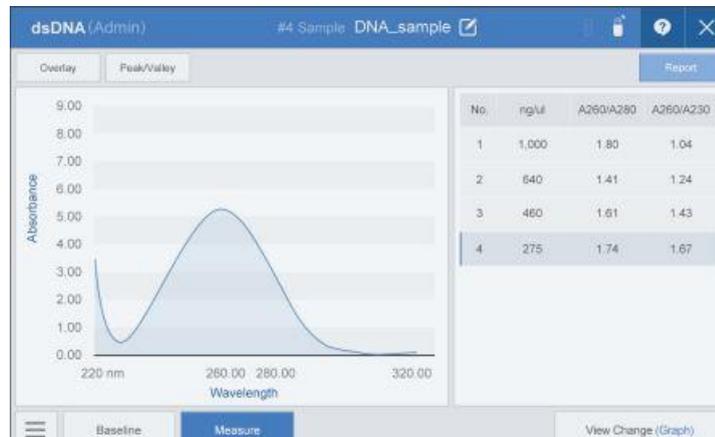

NanoQ is wide wavelength microvolume spectrophotometer with modern design and user convenience UI. It supplies extremely fast and easy quantitative analysis of nucleic acid and protein by UV-VIS absorption spectrophotometry. It provides microvolume sample measuring mode and cuvette measuring mode so can measure wide range of concentration. You can easily set over 20 measuring mode.

## FEATURES

- ❖ **Compact:** It is a small spectrophotometer featuring compact size and main unit control.
- ❖ **Maximization of user friendliness:** There is no need for a user manual since it provides a simple and intuitive user environment.
- ❖ **Cuvette Holder:** It can measure protein and conduct cell counting. \*Cuvettes are only available in NanoQ Plus. Provide pedestal and cuvette measuring mode at NanoQ Plus model. But, do not provide cuvette measuring position at general NanoQ model.
- ❖ **LCD Touch Screen:** A user can easily operate the system using the intuitive LCD screen and touch functions. 7.0-inch, 1280 x 800 HD color display device The built-in capacitive touch LCD panel helps users operate it easily and conveniently.
- ❖ **Loading Guide:** It helps even novice users to drop the sample easily and accurately on the loading spot.
- ❖ **Date Management:** The measurement result can be saved or downloaded to a USB flash drive.
- ❖ **Auto Pathlength:** A user can conduct the measurement precisely because it can be automatically set the pathlength according to the concentration.
- ❖ **Create User Menu:** Can Add User Menu combined by user's most accessed measure mode.
- ❖ **Quick Boot:** There is no need for measurement standby since it does not require a lamp warming-up.

❖ **Full Spectrum Analysis** : NanoQ can measure the absorption spectrum UV-VIS (190 nm~850 nm) in seconds using by array type spectrophotometer technology with Xenon lamp and CMOS. sensor(2048 pixels). It also provide various algorithm like Peak/Valley detection.

❖ There is no need for a user manual since it provides a simple and intuitive user environment. The designated factor is set as the default value for each mode, and the input mode is provided to allow the users to set a factor value which is different from the default. Users can specify the factor pppropriate for the user preference, the lab environment, and the type of protein.
